A. Description

We chose Pottermore (Wizarding World) as our first website to deconstruct. When you enter the website, the purple background with text reading “Join us for some Magical Mischief” immediately pops up. After scrolling down the website, more features and information are shown. There are eight sections on the main page. Each section has various layouts with images and illustrations such as the box and the left and right layout. Compared to the second website we sample-coded, this one is richer in content. Therefore, this is a great website to analyze structure and layout.

A. Description

We chose Dua Lipa 2054 Encore, a website for Dua Lipa's new show. We selected this website because it had an interesting layout and contains various links to multiple social media platforms that is crucial to a modern website. It also contains an embedded YouTube video along with an email subscription option, making the website much more fun to explore and engage. In this stage of initial HTML coding, we tried our best to recreate the details on this website as accurately as possible.
